

IN THE SPECIFICATION:Paragraph 0020

The cylindrical assembly is elevated substantially horizontally and disposed in opposite relation to a golf target. The cylindrical assembly is engaged by mechanical interference fit to the support means by a ~~cradle interface~~ releasable engagement means adapted to disengage under impact with a swinging golf club. The support means includes a horizontal extension elevating the ~~cradle interface~~ releasable engagement means in overhead relation to the stationary ball location on a first end and an L-joint on the second end, a vertical extension engaging the L-joint on its upper end and a base on its lower end, the base having a pair of horizontal support members in a V-shaped configuration extending substantially in opposite direction from the horizontal extension, the juncture of the support members secured to the lower end of the vertical extension, weights on the ends of each horizontal support member distal to the lower end of the vertical extension counterbalance the cylindrical assembly elevated over the stationary ball location.

Paragraph 0021

To accommodate advanced golfers, the cylindrical assembly is reversibly attached by the ~~cradle interface~~ releasable engagement means to reorient towards the golf target wherein lower handicap and tour players are encouraged to swing a club back to the inside on the follow through of a golf swing.
